

## **Cryptyk “OpenSource” Program**

**What is the CRYPTYK platform?** - Cryptyk Inc. is building the CRYPTYK platform\* based on hybrid blockchain technology for the provision of enterprise-class cloud security and cloud storage services. As part of building this revolutionary enterprise security and storage technology, Cryptyk will first launch its own crypto-currency called Cryptyk Tokens (or CTOs) via a global public token sale starting January 2018. Following launch of the CTO ecosystem, Cryptyk plans to use the funds raised from the token sale to transform its existing prototype platform into a fully featured enterprise-class product suite. The phased product release of the CRYPTYK platform is planned to commence within 12 months of the token sale launch (ie: Q1 2019). The product release will start with a 3 month trial phase, during which a Software Development Kit (SDK) will be released to OpenSource development partners to build plug-ins and APIs that use, integrate with or support the CRYPTYK platform. This will allow the OpenSource development community to build a variety of third-party software products on top of, or integrated with Cryptyk’s enterprise security and storage platform.

**What are OpenSource Partners?** – OpenSource Partners will be our most important community of strategic development partners that will help us broaden the number and type of software applications compatible with the CRYPTYK platform. OpenSource Partners will be rewarded with payment in CTOs in return for developing APIs and plug-ins for integrating third-party software with the CRYPTYK platform. OpenSource Partners will be rewarded for developing plug-ins / APIs for integration with either standard consumer software applications or specialized enterprise software used by targeted industries (including financial, banking, legal, accounting, insurance, healthcare and technology industries). Developer payments will be approved on a project-by-project basis according to synergy and use with the CRYPTYK platform. Payments will typically range in value from between \$5000 and \$100,000 depending on the type, complexity and market focus of a proposed development project. Developers can be a single person with a good idea or large software company with existing products that can benefit from the CRYPTYK security and storage platform.

**How do we get involved?** - To apply to be an OpenSource Partner and be eligible to receive payments in CTOs for development work please fill out and sign the Application Form below and email to [opensource@cryptyk.com](mailto:opensource@cryptyk.com). A Cryptyk team member will then contact you to discuss the size, scope, duration and application of the proposed development project and the appropriate reward value upon completion.

### **Application Form** (email completed form to [opensource@cryptyk.com](mailto:opensource@cryptyk.com))

Company Name (if applicable): \_\_\_\_\_
